## **DETAILED ACTION**

### ***Information Disclosure Statement***

1. The last reference listed on page 1 of the PTO Form 1449 was not considered because a copy of said reference was not provided. Further, pages 2-4 of the PTO Form 1449 were also not provided. Applicants are requested to provide said pages and references when responding to this Office Action for prompt consideration.

### ***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 2-6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The phrase "or greater" is indefinite because it does not clearly set forth the metes and bounds of the claims. In the instant case the phrase does not set an upper limit for the range (in claims 5 and 6) or the upper limit amount (in claims 2-4).

### ***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-5, 7-12, and 16-18 rejected under 35 U.S.C. 102(b) as being clearly anticipated by U.S. Patent No. 6,175,027 B1, cited by Applicants. The '027 patent discloses a one pot

synthesis of bis(N-Butylcyclopentadienyl)zirconium dichloride in large scale amounts. See Example 6.

***Claim Rejections - 35 USC § 103***

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

7. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

8. Claims 1-16 and 18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Balboni et al., Inorganic Chemistry, Vol. 40, No. 26, pp. 6588-6597 (2001). The Balboni et al.

Art Unit: 1621

reference teach the one-pot synthesis of Group 4 dimethylmetallocenes. Particularly, the Balboni et al. reference teach the addition of a lithium alkyl to an indene compound to form a lithiated indene compound followed by the addition of a Group 4 transition metal halide to form a solution of the Group 4 dimethylmetallocene. See experimental section and Table 1 on page 6589. The reference differs from the instant claims in that the one-pot method is not performed in large scale amounts. However, it is with the pervue of one skilled in the art to adjust the amounts reactants used in order to run the reaction at large scale. Merely modifying the process conditions such as temperature and concentration is not a patentable modification absent a showing of criticality. In re Aller, 220 F.2d 454, 105 USPQ 233 (CCPA 1955).

***Allowable Subject Matter***

9. Claims 17 and 19 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

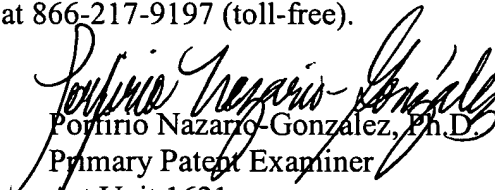

10. Claim 20 is allowed over the prior art of record.
